

AMCO Change Management

AMCO Change Management is an in-house governance accelerator for OneStream that provides structured control and traceability over application changes.

It is designed to support compliant, controlled promotion of changes between environments.

Key Capabilities

SOX-Compliant Change Tracking

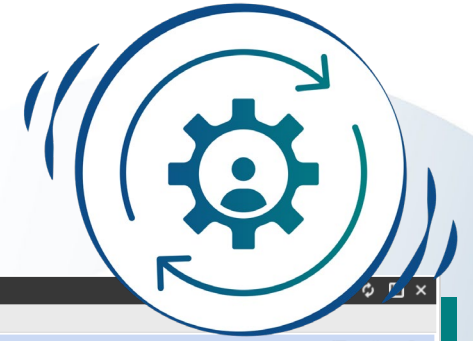

- Generates audit reports for changes migrated from source to target environments
- Provides traceability and documentation of transported components

Structured Change Packaging

- Extracts application components in a unified and standardized way
- Supports controlled release and deployment processes

Dashboard Framework Includes

- Main page with:
 - Selection table for audit logging and extraction
 - XLSX import functionality
- Settings page (install/uninstall solution)
- Help documentation
