

# Profitability & Cost Analysis in OneStream

OneStream gives you the power to create a flexible allocation model and generate real insight into the profitability of your organization, helping you to drive the business through any scenario.

## How does it work?

Users are presented with an allocation dashboard where the entire setup can be built. Drivers allow users to compose allocation rules and determine which entities, accounts and scenarios should be run. This can be fully personalized creating a flexible, comprehensive and user-friendly experience.

There is an option to run the allocation during regular financial processes or to trigger via the push of a button. Although it is fully flexible, the goal is to never look backwards again (unless adjustments are required) and analyze the allocation outcomes every period.

*Implementing the project went very well. This was the result of effective project management and a professional cooperation with AMCO.*
